

20 April 1983

MEMORANDUM FOR: Chairman, Fine Arts Commission (FAC)  
STAT  
FROM: [REDACTED]  
Chief, Headquarters Engineering Branch,  
RECD/OL  
SUBJECT: Ceiling Height in GE Corridor  
REFERENCE: Memo for C/HEB from C/FAC, dtd 13 Apr 83,  
Same Subject (OL 20325-83)

1. Regarding telephone conversations between C/FAC and the undersigned and between Bob Montano, GSA Construction Engineer, and the undersigned, it was agreed that the highest ceiling that could be placed in the GE Corridor would be eight feet four inches (8'4") instead of the seven feet ten inches (7'10") previously intended.
2. While it was the desire of the Fine Arts Commission to raise the ceiling to the eight foot six inch (8'6") level, the 8'4" level is believed to be the best compromise possible consistent with the congestion presently in the overhead area.
